Infrastucture Assessment

Businesses are constantly evolving to keep up with technology that will make them more competitive. Technologies like virtualization, mobility and unified communications have transformed data centers and the way businesses operate.

The key to change and successfully operating the technology that supports business is proper planning. Agility, performance and manageability will all suffer at a potentially high cost to the business without this.

Service Overview

An Infrastructure Assessment is designed to provide an in-depth look at your network and server infrastructure to assist in uncovering performance issues as well as planning for upgrades or future growth.

Technicians gather detailed data about assets, architecture and performance. Simulations can be run to assist with the planning process for upgrades and to validate proposed architecture improvements.

The resulting data provides detailed, actionable information about the infrastructure and provides a foundation in which to correlate issues and validate the architecture or identify areas requiring improvement. A detailed report with an IT benchmark score, data on the complete network and server infrastructure as well as analysis of the data including recommendations is provided.

- IT inventory including end-of-life (EOL) devices
- IT benchmark score
- Topology diagram
- Review of top industry-wide IT issues
  - ✓ Security vulnerabilities
  - ✓ Virtualization candidates
  - ✓ Bandwidth bottlenecks
  - ✓ Backup failures & critical log events

Does Your IT infrastructure Need to be Optimized?

73% of organizations have correctable performance problems.

47% of organizations have storage latency performance problems.

47% of organizations have VMware deployments that have CPU oversubscription.

Additional Options

- Traffic simulation for a planned upgrade
- Additional sites, simulations or reports
- Custom deployment services
- Training

Benefits

An Infrastructure Assessment will help:

- Improve and optimize your data center and virtual infrastructure
- Get actionable information on devices before migrating or adding to the infrastructure
- Solve problems faster by identifying the source of issues and why they occur

Optimize your infrastructure and plan for change with an Infrastructure Assessment. Contact your Sales Associate to get started today.
