Virtualization Health Check

Virtualization addresses one of IT's most pressing challenges — infrastructure sprawl. This has forced organizations to channel as much as 70 percent of their budgets into maintenance of this infrastructure, leaving scant resources for innovations that can be used to grow the business.

A Virtualization Health Check helps optimize the virtualization environment for performance, scaling and managability. It can help ensure your business is getting the most of your virtualized environment to free up some of these resources as well as use it as a roadmap to moving into a cloud computing environment.

Service Overview

A Virtualization Health Check begins with understanding the business goals, objectives and pain points to understand the company's culture and how it socializes to change.

Technical architects will perform a gap analysis of the projected goals versus reality as well as focus on process definition and improvements in areas that will help the environment run more efficiently and make it automated and scalable.

An in-depth analysis of the virtual infrastructure is conducted untilizing various tools to collect and inventory information. Each assessment includes:

- Best practices assessment
- Hardware assessment
- Storage assessment
- Management systems assessment
- Interactive workshop to facilitate knowledge transfer on best practices

Is Your Virtualization Environment Optimized?

>50%
Percentage of virtualized server environments.

47% of organizations have storage latency performance problems.

80%
organizations using cloud services in some form in the next 12 months.

Benefits

Ensure you are getting the most of your virtualization environment. A Virtualization Health Check will help:

- **Ensure systems were installed properly** as well as **optimize the performance of the virtualization environment** including server utilization and security
- **Save money by streamling operations** in multi-tenant environments.
- **Achieve less downtime and fewer unplanned outages** as well is **improve business continuity and disaster recovery**.
- **Prepare a roadmap for future improvements** as defined by the organization's objectives
- Lessen risks by **leveraging experienced, certified consultants and proven best practices**.
